

**Example case:** PFTs and imaging studies in a case of RAS with mixed restrictive and obstructive pattern

▪ **Evolution of FEV<sub>1</sub>, FVC and TLC during follow-up**

▪ **Values at the time-point of year 3:**

FEV<sub>1</sub> % of baseline = 53%

FVC % of baseline = 61%

TLC % of baseline = 25%

FEV<sub>1</sub>/FVC = 0.55

- Computed tomography of the thorax in the same patient showing apical fibrosis and an interstitial pattern compatible with RAS
